1 Title, affiliation and language
A shared section that applies to all BSc and MSc Programmes at the Faculty of Science is linked to this programme-specific curriculum.

1.1 Title
The MSc Programme in Biochemistry with a specialisation in Immunology and Metabolism leads to a Master of Science (MSc) in Biochemistry with a specialisation in Immunology and Metabolism with the Danish title: *Cand.scient. (candidatus/candidata scientiarum) i biokemi med en specialisering i immunologi og metabolisme.*

The MSc Programme in Biochemistry with a specialisation in Molecular Cell Biology leads to a Master of Science (MSc) in Biochemistry with a specialisation in Molecular Cell Biology with the Danish title: *Cand.scient. (candidatus/candidata scientiarum) i biokemi med en specialisering i molekylær cellbiologi.*

The MSc Programme in Biochemistry with a specialisation in Molecular Genetics leads to a Master of Science (MSc) in Biochemistry with a specialisation in Molecular Genetics with the Danish title: *Cand.scient. (candidatus/candidata scientiarum) i biokemi med en specialisering i molekylær genetik.*

The MSc Programme in Biochemistry with a specialisation in Molecular Microbiology leads to a Master of Science (MSc) in Biochemistry with a specialisation in Molecular Microbiology with the Danish title: *Cand.scient. (candidatus/candidata scientiarum) i biokemi med en specialisering i molekylær mikrobiologi.*

The MSc Programme in Biochemistry with a specialisation in Protein Chemistry leads to a Master of Science (MSc) in Biochemistry with a specialisation in Protein Chemistry with the Danish title: *Cand.scient. (candidatus/candidata scientiarum) i biokemi med en specialisering i proteinkemi.*

1.2 Affiliation
The programme is affiliated with the Study Board for the Biological Area and the students can both elect, and be elected, to this study board.

1.3 Corps of external examiners
The following corps of external examiners is used for the central parts of the MSc Programme:
- Corps of External Examiners for Biology (*biologi*).

1.4 Language
The language of this MSc Programme is English.

2 Academic profile
2.1 Purpose
The MSc Programme in Biochemistry is a research-based programme that aims to provide students with competences, skills and knowledge within one of the biochemistry subject areas, with an individually chosen specialisation centred on an independent, experimental research project.
2.2 General programme profile
The student chooses one of the five different specialisations (Immunology and Metabolism, Molecular Cell Biology, Molecular Genetics, Molecular Microbiology, and Protein Chemistry). In addition, the student follow supplementary courses where restricted optional courses are within their specialisation and optional courses can be in other disciplines. Thus, it is possible to create an individual academic profile within one of the five broad specialisations.

Biochemistry is the key subject area of the programme. The student will be trained to critically understand, analyse and evaluate theoretical and experimental methods in biochemistry and evaluate scientific conclusions within their specialization. Both from original scientific literature and in relation to their own experiments carried out during the thesis.

2.3 General structure of the programme
The MSc Programme is set at 120 ECTS.

The MSc Programme in Biochemistry consists of the following elements:
- Specialisation, 120 ECTS, including the thesis.

The student must choose one of the following specialisations:
- Immunology and Metabolism.
- Molecular Cell Biology.
- Molecular Genetics.
- Molecular Microbiology.
- Protein Chemistry.

2.4 Career opportunities
The MSc Programme in Biochemistry qualifies students to become professionals within business functions and/or areas such as:
- A PhD programme
- Within their area of specialisation, graduates will attain a high level of theoretical and experimental expertise that will qualify them to work independently, be part of a research team and manage projects at universities, biotech and pharmaceutical industry and hospitals.

3 Description of competence profiles
Students following the MSc Programme acquire the knowledge, skills and competences listed below. Students will also acquire other qualifications through elective subject elements and other study activities.

3.1 Immunology and Metabolism
On completion of the programme, an MSc in Biochemistry with a specialisation in Immunology and Metabolism has acquired the following:

Knowledge about:
- Research at a high international level, including an overview of the latest research in Immunology and Metabolism and relevant adjacent main subject areas.
- Industrial and medical applications of their subject.
- The latest research and relevant theoretical and experimental methods in Immunology and Metabolism.
Skills in/to:
- Master relevant theoretical and experimental scientific methods in Immunology and Metabolism.
- Read and understand original biochemistry literature.
- Document the results of experiments.
- Use the subject’s main databases and relevant IT Technology.

Competences in/to:
- Formulate, structure and manage a research project.
- Develop and apply biochemical methodology to generate new knowledge.
- Generate, evaluate and analyse data, including its degree of uncertainty, potential sources of error, the relevance of the methodology used and the validity of the data.
- Organise their own work, both individually and as part of a research group.
- Manage projects in public- and private-sector institutions and companies.
- Critically read and evaluate original biochemical literature within Immunology and Metabolism, identify scientific issues, reflect on the model solutions used and develop alternative solutions.
- Discuss the application of biochemistry research results in social, environmental and ethical contexts on the basis of academic arguments.
- Disseminate the results of their own and other people’s experiments and complex problems using correct academic terminology, both orally and in writing.
- Take independent responsibility for their own academic development and specialisation.

3.2 Molecular Cell Biology
On completion of the programme, an MSc in Biochemistry with a specialisation in Molecular Cell Biology has acquired the following:

Knowledge about:
- Research at a high international level, including an overview of the latest research in Molecular Cell Biology and relevant adjacent main subject areas.
- Industrial and medical applications of their subject.
- The latest research and relevant theoretical and experimental methods in Molecular Cell Biology

Skills in/to:
- Master relevant theoretical and experimental scientific methods in Molecular Cell Biology.
- Read and understand original biochemistry literature.
- Document the results of experiments.
- Use the subject’s main databases and relevant IT Technology.

Competences in/to:
- Formulate, structure and manage a research project.
- Develop and apply biochemical methodology to generate new knowledge.
- Generate, evaluate and analyse data, including its degree of uncertainty, potential sources of error, the relevance of the methodology used and the validity of the data.
- Organise their own work, both individually and as part of a research group.
- Manage projects in public- and private-sector institutions and companies.
• Critically read and evaluate original biochemical literature within Molecular Cell Biology, identify scientific issues, reflect on the model solutions used and develop alternative solutions.
• Discuss the application of biochemistry research results in social, environmental and ethical contexts on the basis of academic arguments.
• Disseminate the results of their own and other people's experiments and complex problems using correct academic terminology, both orally and in writing.
• Take independent responsibility for their own academic development and specialisation.

3.3 Molecular Genetics
On completion of the programme, an MSc in Biochemistry with a specialisation in Molecular Genetics has acquired the following:

Knowledge about:
• Research at a high international level, including an overview of the latest research in Molecular Genetics and relevant adjacent main subject areas.
• Industrial and medical applications of their subject.
• The latest research and relevant theoretical and experimental methods in Molecular Genetics.

Skills in/to:
• Master relevant theoretical and experimental scientific methods in Molecular Genetics.
• Read and understand original biochemistry literature.
• Document the results of experiments.
• Use the subject’s main databases and relevant IT Technology.

Competences in/to:
• Formulate, structure and manage a research project.
• Develop and apply biochemical methodology to generate new knowledge.
• Generate, evaluate and analyse data, including its degree of uncertainty, potential sources of error, the relevance of the methodology used and the validity of the data.
• Organise their own work, both individually and as part of a research group.
• Manage projects in public- and private-sector institutions and companies.
• Critically read and evaluate original biochemical literature within Molecular Genetics, identify scientific issues, reflect on the model solutions used and develop alternative solutions.
• Discuss the application of biochemistry research results in social, environmental and ethical contexts on the basis of academic arguments.
• Disseminate the results of their own and other people's experiments and complex problems using correct academic terminology, both orally and in writing.
• Take independent responsibility for their own academic development and specialisation.

3.4 Molecular Microbiology
On completion of the programme, an MSc in Biochemistry with a specialisation in Molecular Microbiology has acquired the following:

Knowledge about:
• Research at a high international level, including an overview of the latest research in Molecular Microbiology and relevant adjacent main subject areas.
• Industrial and medical applications of their subject.
• The latest research and relevant theoretical and experimental methods in Molecular Microbiology

**Skills in/to:**
• Master relevant theoretical and experimental scientific methods in Molecular Microbiology.
• Read and understand original biochemistry literature.
• Document the results of experiments.
• Use the subject’s main databases and relevant IT Technology.

**Competences in/to:**
• Formulate, structure and manage a research project.
• Develop and apply biochemical methodology to generate new knowledge.
• Generate, evaluate and analyse data, including its degree of uncertainty, potential sources of error, the relevance of the methodology used and the validity of the data.
• Organise their own work, both individually and as part of a research group.
• Manage projects in public- and private-sector institutions and companies.
• Critically read and evaluate original biochemical literature within Molecular Microbiology, identify scientific issues, reflect on the model solutions used and develop alternative solutions.
• Discuss the application of biochemistry research results in social, environmental and ethical contexts on the basis of academic arguments.
• Disseminate the results of their own and other people's experiments and complex problems using correct academic terminology, both orally and in writing.
• Take independent responsibility for their own academic development and specialisation.

### 3.4 Protein Chemistry

On completion of the programme, an MSc in Biochemistry with a specialisation in Protein Chemistry has acquired the following:

**Knowledge about:**
• Research at a high international level, including an overview of the latest research in Protein Chemistry and relevant adjacent main subject areas.
• Industrial and medical applications of their subject.
• The latest research and relevant theoretical and experimental methods in Protein Chemistry.

**Skills in/to:**
• Master relevant theoretical and experimental scientific methods in Protein Chemistry.
• Read and understand original biochemistry literature.
• Document the results of experiments.
• Use the subject’s main databases and relevant IT Technology.

**Competences in/to:**
• Formulate, structure and manage a research project.
• Develop and apply biochemical methodology to generate new knowledge.
• Generate, evaluate and analyse data, including its degree of uncertainty, potential sources of error, the relevance of the methodology used and the validity of the data.
• Organise their own work, both individually and as part of a research group.
• Manage projects in public- and private-sector institutions and companies.
• Critically read and evaluate original biochemical literature within Protein Chemistry, identify scientific issues, reflect on the model solutions used and develop alternative solutions.
• Discuss the application of biochemistry research results in social, environmental and ethical contexts on the basis of academic arguments.
• Disseminate the results of their own and other people’s experiments and complex problems using correct academic terminology, both orally and in writing.
• Take independent responsibility for their own academic development and specialisation.

4 Admission requirements
With a Bachelor’s degree in Biochemistry from the University of Copenhagen the student is granted reserved access and guaranteed a place on the MSc Programme in Biochemistry if the student applies before the application deadline during the first application period after the completion of the Bachelor’s degree.

4.1 Applicants with a closely related Bachelor’s degree
Applicants with a Bachelor’s degree in the following are directly academically qualified for admission to the MSc programme in Biochemistry:

• Applicants with a Bachelor’s degree in Biochemistry, Molecular Biomedicine or Nanoscience from the University of Copenhagen.
• Applicants with a Bachelor’s degree in Biotechnology or Molecular Biology from Aarhus University.

4.2 Applicants with a Bachelor’s degree within the field of Science
Applicants with one of the following:

• Bachelor’s degree in Biochemistry and Molecular Biology from the University of Southern Denmark
• Bachelor’s degree in Molecular Biology from Roskilde University
• Bachelor’s degree from the Faculty of Science, University of Copenhagen

may also be admitted if their programme includes the following:

• A minimum of 60 ECTS within chemistry and biochemistry/molecular biology of which a minimum of 30 ECTS must be in chemistry and 22.5 ECTS in biochemistry/molecular biology.
• In total, the applicant must have a minimum of 30 ECTS that stem from courses with experimental laboratory exercises.

Subject elements in protein chemistry or biophysical chemistry may be counted either as chemistry or biochemistry/molecular biology.

4.3 Other applicants
The Faculty may also admit applicants who, after an individual academic assessment, are deemed to possess educational qualifications equivalent to those required in Subclauses 4.1-2.

4.4 Language requirements

4.4.1 Applicants from Nordic universities
Applicants with a Bachelor’s degree from Nordic universities must as a minimum document English language qualifications comparable to a Danish upper secondary school English B level.
4.4.2 Non-Nordic applicants
Applicants with a non-Nordic Bachelor’s degree must be able to document English proficiency corresponding to an IELTS test score of minimum 6.5 or a TOEFL test score of minimum 83 (Internet-based).

5 Prioritisation of applicants
If the number of qualified applicants to the programme exceeds the number of places available, applicants will be prioritised as follows:

1) Applicants with a Bachelor’s degree in Biochemistry from the University of Copenhagen seeking admission by way of direct extension of their completed BSc programme.
2) Applicant’s total number of ECTS in the areas of chemistry and biochemistry/molecular biology and documented laboratory experience.
3) Applicants ranked according to grades achieved in the areas concerned. If different grading systems make comparison impossible, applicants will be prioritised on the basis of an individual evaluation by the Admission Committee.

If the number of qualified applicants within a category exceeds the number of places available, applicants will be prioritised according to the following criteria (listed below in prioritised order):
   - ECTS achieved in the areas metabolism, enzymology, protein science, cell biology, organic chemistry and physical chemistry.

6 Structure of the programme
The compulsory subject elements, restricted elective subject elements and the thesis constitute the central parts of the programme (Section 21 of the Ministerial Order on Bachelor and Master’s Programmes (Candidatus) at Universities).

Before the beginning of the MSc Programme the student must choose a specialisation.

6.1 Immunology and Metabolism
The specialisation is set at 120 ECTS and consists of the following:
   - Compulsory subject elements, 30 ECTS
   - Restricted elective subject elements, 15 ECTS
   - Elective subject elements, 15 ECTS
   - Thesis, 60 ECTS

6.1.1 Compulsory subject elements
All of the following subject elements are to be covered (30 ECTS):

- NBIK13019U Principal Subject in Immunology and Metabolism 1 Block 1 7.5 ECTS
- NBIK13020U Principal Subject in Immunology and Metabolism 2 Block 2 7.5 ECTS
- NBIK13014U Major Subject Project Block 2 7.5 ECTS
- NBIK13021U Principal Subject in Immunology and Metabolism 3 Block 1 7.5 ECTS

6.1.2 Restricted elective subject elements
15 ECTS are to be covered as subject elements from the following list:

- NBIK15006U Advanced Cell Biology Block 1 7.5 ECTS
- NBIK10015U Cell Cycle Control and Cancer Block 1 7.5 ECTS
6.1.3 Elective subject elements
15 ECTS are to be covered as elective subject elements.
All subject elements at MSc level may be included as elective subject elements in the MSc Programme.

BSc subject elements corresponding to 7.5 ECTS may be included in the MSc Programme.

Projects outside the course scope may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 5 to the shared section of the curriculum.

Projects in practice may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 4 to the shared section of the curriculum.

6.1.4 Thesis
The MSc Programme in Biochemistry with a specialisation in Immunology and Metabolism includes a thesis corresponding to 60 ECTS, as described in Appendix 2 to the shared curriculum. The thesis must be written within the academic scope of the programme.

6.1.5 Academic mobility
The curriculum makes it possible to follow subject elements outside the Faculty of Science.

For students admitted in September the academic mobility in the MSc Programme in Biochemistry with a specialisation in Immunology and Metabolism is placed in block 1+2 of the 1st year.

Academic mobility requires that the student follows the rules and regulations regarding pre-approval and credit transfer.

In addition the student has the possibility to arrange similar academic mobility in other parts of the programme.

6.2 Molecular Cell Biology
The specialisation is set at 120 ECTS and consists of the following:

- Compulsory subject elements, 30 ECTS
- Restricted elective subject elements, 15 ECTS
- Elective subject elements, 15 ECTS
- Thesis, 60 ECTS

6.2.1 Compulsory subject elements
All of the following subject elements are to be covered (30 ECTS):

<table>
<thead>
<tr>
<th>Code</th>
<th>Subject</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>NBIK10011U</td>
<td>Principal Subject in Molecular Cell Biology 1</td>

<td>7.5 ECTS</td>
</tr>
</tbody>
</table>

6.2.3 Elective subject elements
15 ECTS are to be covered as elective subject elements.
All subject elements at MSc level may be included as elective subject elements in the MSc Programme.

BSc subject elements corresponding to 7.5 ECTS may be included in the MSc Programme.

Projects outside the course scope may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 5 to the shared section of the curriculum.

Projects in practice may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 4 to the shared section of the curriculum.

6.2.4 Thesis
The MSc Programme in Biochemistry with a specialisation in Molecular Cell Biology includes a thesis corresponding to 60 ECTS, as described in Appendix 2 to the shared curriculum. The thesis must be written within the academic scope of the programme.

6.2.5 Academic mobility
The curriculum makes it possible to follow subject elements outside the Faculty of Science.

For students admitted in September the academic mobility in the MSc Programme in Biochemistry with a specialisation in Molecular Cell Biology is placed in block 1+2 of the 1st year.

Academic mobility requires that the student follows the rules and regulations regarding pre-approval and credit transfer.

In addition the student has the possibility to arrange similar academic mobility in other parts of the programme.

6.3 Molecular Genetics
The specialisation is set at 120 ECTS and consists of the following:

- Compulsory subject elements, 30 ECTS
- Restricted elective subject elements, 15 ECTS
- Elective subject elements, 15 ECTS
- Thesis, 60 ECTS

6.3.1 Compulsory subject elements
All of the following subject elements are to be covered (30 ECTS):

<table>
<thead>
<tr>
<th>Subject Code</th>
<th>Subject Name</th>

</tr>
</tbody>
</table>

6.3.3 Elective subject elements

15 ECTS are to be covered as elective subject elements.

All subject elements at MSc level may be included as elective subject elements in the MSc Programme.

BSc subject elements corresponding to 7.5 ECTS may be included in the MSc Programme.

Projects outside the course scope may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 5 to the shared section of the curriculum.

Projects in practice may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 4 to the shared section of the curriculum.

6.3.4 Thesis

The MSc Programme in Biochemistry with a specialisation in Molecular Genetics includes a thesis corresponding to 60 ECTS, as described in Appendix 2 to the shared curriculum. The thesis must be written within the academic scope of the programme.

6.2.5 Academic mobility

The curriculum makes it possible to follow subject elements outside the Faculty of Science.

For students admitted in September the academic mobility in the MSc Programme in Biochemistry with a specialisation in Molecular Genetics is placed in block 1+2 of the 1st year.

Academic mobility requires that the student follows the rules and regulations regarding pre-approval and credit transfer.

In addition the student has the possibility to arrange similar academic mobility in other parts of the programme.

6.4 Molecular Microbiology

The specialisation is set at 120 ECTS and consists of the following:

- Compulsory subject elements, 30 ECTS
- Restricted elective subject elements, 15 ECTS
Elective subject elements, 15 ECTS
Thesis, 60 ECTS

6.4.1 Compulsory subject elements
All of the following subject elements are to be covered (30 ECTS):

<table>
<thead>
<tr>

6.4.3 Elective subject elements
15 ECTS are to be covered as elective subject elements. All subject elements at MSc level may be included as elective subject elements in the MSc Programme.

BSc subject elements corresponding to 7.5 ECTS may be included in the MSc Programme.

Projects outside the course scope may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 5 to the shared section of the curriculum.

Projects in practice may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 4 to the shared section of the curriculum.

6.4.4 Thesis
The MSc Programme in Biochemistry with a specialisation in Molecular Microbiology includes a thesis corresponding to 60 ECTS, as described in Appendix 2 to the shared curriculum. The thesis must be written within the academic scope of the programme.

6.4.5 Academic mobility
The curriculum makes it possible to follow subject elements outside the Faculty of Science.

For students admitted in September the academic mobility in the MSc Programme in Biochemistry with a specialisation in Molecular Microbiology is placed in block 1+2 of the 1st year.
Academic mobility requires that the student follows the rules and regulations regarding pre-approval and credit transfer.

In addition the student has the possibility to arrange similar academic mobility in other parts of the programme.

**6.5 Protein Chemistry**
The specialisation is set at 120 ECTS and consists of the following:
- Compulsory subject elements, 30 ECTS
- Restricted elective subject elements, 15 ECTS
- Elective subject elements, 15 ECTS
- Thesis, 60 ECTS

**6.5.1 Compulsory subject elements**
All of the following subject elements are to be covered (30 ECTS):

<table>
<thead>
<tr>
<th>Subject Code</th>
<th>Subject Name</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>NBIK09021U</td>

</tbody>
</table>

**6.5.2 Restricted elective subject elements**
15 ECTS are to be covered as subject elements from the following list:

<table>
<thead>
<tr>
<th>Subject Code</th>
<th>Subject Name</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>NKEK14009U</td>
<td>Advanced Crystallography</td>

<td>Advanced Protein Science 1 – Protein Interactions and Sequences</td>
<td>Block 3</td>
<td>7.5 ECTS</td>
</tr>
<tr>
<td>NKEK12006U</td>
<td>Surface Physical Chemistry</td>
<td>Block 3</td>
<td>7.5 ECTS</td>
</tr>
<tr>
<td>NBIK10024U</td>
<td>Advanced Protein Science 2 – Protein Structure Determination</td>
<td>Block 4</td>
<td>7.5 ECTS</td>
</tr>
<tr>
<td>NBIK13017U</td>
<td>Molecular Biotechnology</td>
<td>Block 4</td>
<td>7.5 ECTS</td>
</tr>
</tbody>
</table>

**6.5.3 Elective subject elements**
15 ECTS are to be covered as elective subject elements. All subject elements at MSc level may be included as elective subject elements in the MSc Programme.

BSc subject elements corresponding to 7.5 ECTS may be included in the MSc Programme.

Projects outside the course scope may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 5 to the shared section of the curriculum.

Projects in practice may be included in the elective section of the programme with up to 15 ECTS. The regulations are described in Appendix 4 to the shared section of the curriculum.
6.5.4 Thesis
The MSc Programme in Biochemistry with a specialisation in Protein Chemistry includes a thesis corresponding to 60 ECTS, as described in Appendix 2 to the shared curriculum. The thesis must be written within the academic scope of the programme.

6.5.5 Academic mobility
The curriculum makes it possible to follow subject elements outside the Faculty of Science.

For students admitted in September the academic mobility in the MSc Programme in Biochemistry with a specialisation in Protein Chemistry is placed in block 1+2 of the 1st year.

Academic mobility requires that the student follows the rules and regulations regarding pre-approval and credit transfer.

In addition the student has the possibility to arrange similar academic mobility in other parts of the programme.

7 Exemptions
In exceptional circumstances, the study board may grant exemptions from the rules in the curriculum specified solely by the Faculty of Science.

8 Commencement etc.
8.1 Validity
This subject specific section of the curriculum applies to all students enrolled in the programme – see however Appendix 2.

8.2 Transfer
Students enrolled on previous curricula may be transferred to the new one as per the applicable transfer regulations or according to an individual credit transfer by the study board.

8.3 Amendment
The curriculum may be amended once a year so that any changes come into effect at the beginning of the academic year. Amendments must be proposed by the study board and approved by the Dean.

Notification about amendments that tighten the admission requirements for the programme will be published online at www.science.ku.dk one year before they come into effect.

If amendments are made to this curriculum, an interim arrangement may be added if necessary to allow students to complete their MSc Programme according to the amended curriculum.
### Appendix 1 Tables

Appendix 2 Interim arrangements

The Shared Section of the BSc and MSc Curricula for Study Programmes applies to all students.

The interim arrangements below only consist of parts where the current curriculum differs from the rules and regulations that were previously valid. Therefore, if information about relevant rules and regulations are missing, it can be found in the curriculum above.

1 General changes for students admitted in the academic year 2016/17
Students admitted to the MSc Programme in the academic year 2016/17 must finish the programme as listed in the curriculum above with the following exceptions.

1.1 Specialisations
Students admitted to the MSc Programme in the academic year 2016/17 are allowed to finish their programme with one of the specialisations that were outlined in the curriculum.

1.1.1 Immunology and Metabolism
Restricted elective subject elements
15 ECTS are to be covered by subject elements from the following list:

<table>
<thead>
<tr>
<th>Subject Elements</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restricted elective subject elements offered as part of the specialisation in Immunology and Metabolism in this curriculum (see above)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>NBIK15022U Advanced Topics in Bioinformatics</td>
<td>Block 1</td>
<td>7.5 ECTS</td>
</tr>
<tr>
<td>NBIK12011U Ion Transport in Cancer</td>
<td>Discontinued*</td>
<td>7.5 ECTS</td>
</tr>
</tbody>
</table>

* See course specific changes below.

1.1.2 Molecular Cell Biology
Restricted elective subject elements
15 ECTS are to be covered by subject elements from the following list:

<table>
<thead>
<tr>
<th>Subject Elements</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restricted elective subject elements offered as part of the specialisation in Molecular Cell Biology in this curriculum (see above)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>NBIK15022U Advanced Topics in Bioinformatics</td>
<td>Block 1</td>
<td>7.5 ECTS</td>
</tr>
<tr>
<td>NBIK12011U Ion Transport in Cancer</td>
<td>Discontinued*</td>
<td>7.5 ECTS</td>
</tr>
</tbody>
</table>

* See course specific changes below.

2 General changes for students admitted in the academic year 2015/16
Students admitted to the MSc Programme in the academic year 2015/16 must finish the programme as listed in the curriculum above with the following exceptions.

2.1 Specialisations
Students admitted to the MSc Programme in the academic year 2015/16 are allowed to finish their programme with one of the specialisations that were outlined in the curriculum.

2.1.1 Immunology and Metabolism
Restricted elective subject elements
15 ECTS are to be covered by subject elements from the following list:

<table>
<thead>
<tr>
<th>Subject Elements</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restricted elective subject elements offered as part of the specialisation in Immunology and Metabolism in this curriculum (see above)</td>

3 General changes for students admitted in the academic year 2014/15 or earlier
Students admitted to the MSc Programme in the academic year 2014/15 or earlier must finish the programme as listed in the curriculum above with the following exceptions.

Restricted elective subject elements
15 ECTS are to be covered by subject elements from the following list:

<table>
<thead>
<tr>
<th>Subject Element</th>
<th>Course Title</th>
<th>Block</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>All courses offered by the Department of Biology</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>and the Department of Chemistry</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This applies to all of the five specialisations.

</tr>
</tbody>
</table>
Appendix 3 Description of objectives for the thesis

After completing the thesis, the student should have:

Knowledge about:
- Theory and methods (experimentally and theoretically) within biochemistry and the selected specialisation (Immunology and Metabolism, Molecular Cell Biology, Molecular Genetics, Molecular Microbiology or Protein Chemistry).
- The strength and limitations of a broad range of experimental methods in biochemistry and chemistry.
- Formulation and analysis of problems.

Skills in/to:
- Define a professionally defined issue of biochemical relevance.
- Handle model organisms scientifically and safely.
- Select appropriate theories and methods to address one or more issues in a given academic frame within one or more selected fields (Immunology and Metabolism, Molecular Cell Biology, Molecular Genetics, Molecular Microbiology or Protein Chemistry).
- Communicate an issue clearly and manageable in a biochemical scientific context - both in writing and orally - to the appropriate audience using sound professional biochemical terminology.
- Organize and carrying out a major experimental work.
- Select and use a wide range of different methods and in silico analyses and equipment relevant to the experimental biochemical, chemical and biological analysis from their practical laboratory experience and within a given academic frame of one or more selected fields (Immunology and Metabolism, Molecular Cell Biology, Molecular Genetics, Molecular Microbiology or Protein Chemistry).
- Work on personal experimental data of biochemical, biological, or chemical in nature, exhaustively.
- Comply with applicable standards and regulations for laboratory work.
- Use standard and specialized software as well as modern information technology for biochemical work.
- Journalize own laboratory work in a level of detail so that others have the opportunity to recreate results.

Competences in/to:
- Implement a research-oriented project independently.
- Analyse, interpret and compare their own and others' experimental data from the underlying biochemical, biological and chemical principles.
- Put their own results in scientific biochemical, biological and chemical relevant context.
- Discuss their own data generation and relate their own data to other people's data within the given academic frame of one or more selected fields (Immunology and Metabolism, Molecular Cell Biology, Molecular Genetics, Molecular Microbiology or Protein Chemistry).
- Critically assess the quality, relevance and probability of their own and others’ data.
- Independently develop their knowledge and skills related to biochemistry, chemistry and biology.
- Assess the safety and environmental aspects of the biochemical, biological and chemical work.
